

Tensiometer/Measuring Head

A running line measuring system that is reliable, accurate, flexible and easy to use. A complete system that includes load cell, encoder, displays and all necessary wiring, hoses and hardware. The WTI Tensiometer is smaller and lighter than other systems and is easily installed in any unit. Utilization of stainless steel, aluminum and composite materials provides superior corrosion resistance. A built in electronic load cell (hermetically sealed) provides accurate line tension. Line speed and depth are measured with a completely sealed optical encoder. Easy to read digital displays provide accurate readouts of tension, depth and speed. All displays can interface with computer equipment via serial or analog outputs.

- Composite wheels reduce line wear
- All corrosion resistant materials
- Internal electronic load cell
- Extremely lightweight and compact
- Simple design allows for easy maintenance
- One year manufacturers warranty

- Multiple line capability
- Weight- 65 lbs.
- Height- 60"
- Length- 30"
- Width- 7"
