

WTI's 7" Universal Distribution Block

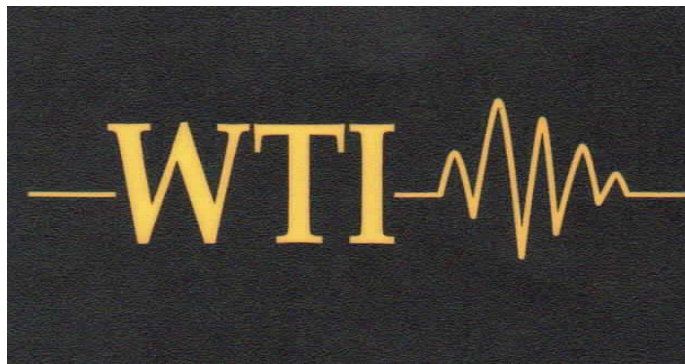

WTI's Universal Distribution Block features a high strength composite wheel that offers longer lasting groove life on the wheel and less wear on your cable. Our composite wheel also provides added wear and impact resistance, along with increased protection against UV Rot and extreme weather conditions.

Other features include a spring loaded "fly-in gate", for easy loading and unloading, and an integrated handle for easier use for the operator. All designed to help you save time and money.

Our frame and gate are cast from high strength heat-treated A356 Aluminum, and all blocks come with a standard socket eye fitting for easy connection to an insulator or other installation attachments.

All WTI blocks come with a One-Year Warranty against manufacturers defects and a Five-Year Limited Warranty on the wheel groove.
