

7" Universal Distribution Block

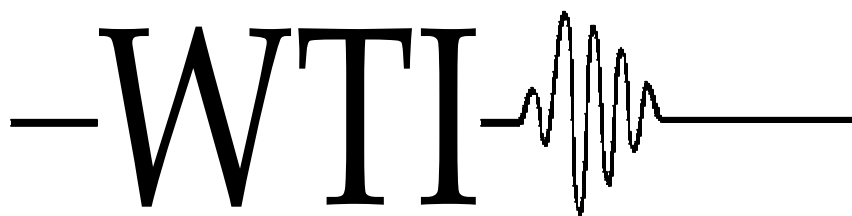

The WTI 7" Universal Distribution Block features a high strength, non-conductive **composite** wheel for incredible wear and impact resistance as well as imposing less wear on the cable. This wheel also extremely resistant to weather and UV rot.

Combining this wheel with a spring loaded "fly-in" gate system and available helicopter arm(s) as well as an integrated handle makes this block easier to use, more reliable and more durable than any other block available today. All of which translate to increased efficiencies and cost savings to the user.

Frame and gate are cast from high strength heat treated A356 aluminum. Blocks are supplied with socket eye fitting for easy attachment to an insulator or for installation of attachment fittings.

Shown with available helicopter arm (HA-
